

CapiraMobile

Custom mobile apps for your library

Engage your patrons like never before

Libraries need to have an app to engage their patrons everywhere they go. Why bother with nothing or some inadequate responsive website which doesn't offer the same level of personalization, functionality and responsiveness of an app, especially when over 70% of Americans own a smartphone? It's what today's generation uses.

Provide a custom mobile experience

We specialize in building customized functionality and features for your app, which will run on Apple iOS and Android OS. If your app calls for special or unique features and aesthetic, we can include them to keep you connected to your patrons wherever they may be.
